Globe Locust and Common Black Locust three years after planting.

2½ years after planting.

Beautiful

GLOBE LOCUST

NEW :: Fast Growing

Formal :: Dense

Dark Green

No Seed Pods

PLANT GLOBE LOCUST

Probably the most beautiful of the newer introductions.

Adapted to both street, parking, and ornamental planting.

A very clean tree—no seed pods to litter up street and yard.

A rapid grower that thrives wherever the Common Black Locust does.

From our large stock of Globe Locust we can supply fine specimen trees with heads one to four years old.

The Globe Locust is a beautiful shade and ornamental tree recently introduced from Europe.

It is fast growing, desirable for both park and street planting, as well as an ornamental tree for the home garden. As its name indicates, the top is globular in shape—naturally so, and without pruning. The foliage is dense and a brilliant deep green—leaves small and very “lacey.” It is low growing, reaching a height of about fifteen feet at maturity, the globe having a spread of about twenty-five feet. In shape, the globe somewhat resembles the Catalpa Bungei, but is not as flat, the foliage entirely different, and is not as “formal” looking.

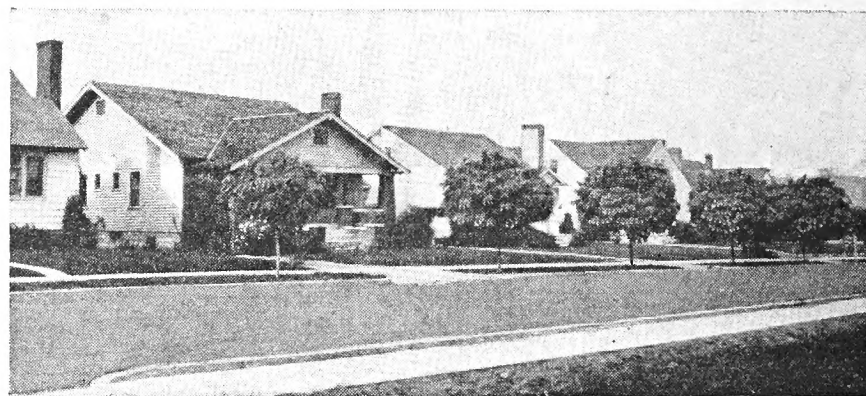

It leaves out early in the spring and the leaves do not fall until very late autumn when practically all other shade trees are bare. It is one of our cleanest shade trees—having no seed pods to clutter up the yards and streets, and the leaves are so small that they are not objectionable after falling.

The Globe Locust is hardy, drought resistant, not particular as to type of soil, and will grow and thrive under adverse conditions. It grows beautifully in the Puget Sound, Washington, country. Several thousand have been planted in the towns of Southern Idaho, where they were first planted in the United States.

The Globe is so dense that it is a veritable bird sanctuary for the more timid of our wild birds.

It is especially desirable for street or highway plantings, as its low height does not interfere with overhead power or telephone wires. Because of their uniformity, they make a striking appearance when planted along a drive way. A very fine example of this is the planting at the State Capitol grounds in Olympia, Washington. The above picture was taken three years after planting. These trees came from our nursery.

The Globe Locust is a tree that will not disappoint the planter, and more of them should be planted.
